EDUCATION

University of Georgia, School of Computing
B.S. in Computer Science

Athens, GA

June 2023 – Aug 2026

Relevant Coursework: Data Structures, Algorithms, SWE, Full-Stack Development, OOP, Data Science/ML, Deep Learning, Comp. Networks, Comp. Graphics, Comp. Architecture, Systems Programming

SKILLS

- **Languages:** Java, JavaScript/TypeScript, Python, C/C++, SQL (PostgreSQL), GDScript, Bash.
- **Tools & Technologies:** React/Next.js, Spring Boot, Node.js, MongoDB, Redis, Docker, Git, Unix/Linux, Postman, REST, Vercel AI SDK, RAG, HuggingFace, NumPy/PyTorch, Google Colab, Jira, Scrum.

RELEVANT EXPERIENCE

UGA ACM (Association for Computing Machinery) | [\[Site\]](#) | *Executive Officer, CSIP Chair* May 2025 – May 2026

- Co-led technical/professional events for a **300+ member org**, collaborating with Google, AWS, and Toyota.
- **Led weekly workshops** on interview-prep for 20+ students (DSA, system design, behavioral) and iterated content from attendee feedback.
- Directed UI/UX and branding refreshes in Figma for recruiting/club visibility and mentored incoming exec board.

Freelance Web Developer (“Holywatr” Band Website) | [\[Site\]](#) Nov 2025 – Mar 2026

- Built a multi-page brand platform (JS/CSS/HTML) for an artist with **659K+ monthly listeners**.
- Integrated Shopify Storefront **GraphQL** queries to power merch catalog flows and storefront interactions.
- Implemented a "digital-horror" responsive UI using **GLSL shaders** to match client brand identity.
- **Optimized SEO** via asset compression and crawlability setup (Open Graph, sitemap.xml, robots.txt).

PROJECT EXPERIENCE

ACM Movies (Cinema E-Booking System) | [\[Demo\]](#) | *Scrum Master, Full-Stack Dev, UI/UX* Aug 2025 – Feb 2026

- Architected a **Spring Boot + PostgreSQL** backend with 80+ REST endpoints and 15 JPA entities; **containerized** backend with **Docker** and deployed to Render.
- Reduced API payloads by ~30–45% using DTO mapping, pagination, and facade/proxy response patterns.
- Implemented **JWT + Spring Security RBAC** with **BCrypt/AES**-based sensitive data protection.
- **Led a 5-person Scrum** team in Jira, improving sprint velocity by ~10% through refined user stories, system modeling, and standardized layered architecture.

RAG-AI Portfolio | [\[Site\]](#) | *Full-Stack Dev, UI/UX* Jun 2025 – Present

- Built a **RAG pipeline** using **Gemini**, **Upstash Redis** vector search, and **Vercel AI SDK** edge-streamed replies grounded in a 39-chunk config-driven corpus via cosine-ranked retrieval.
- **Managed AI infrastructure costs** via IP-based **rate limiting**, query embedding **caching**, and **SHA-256 hashing** to prevent redundant API calls.
- Developed a typed, config-driven architecture and interactive UI systems (Framer Motion, custom pixel art, parallax interpolation).

CourseHub (Awarded “Best Project”) | [\[Demo\]](#) | *Team Lead, Full-Stack Dev, UI* Mar 2025 – May 2025

- Integrated **Gemini API** and **YouTube Data API** to automate study plan generation, reducing manual content creation by ~90%.
- Engineered 15+ REST endpoints and **MongoDB** schemas for community resource sharing with **NextAuth** (JWT).
- **Led a 4-person Agile** team via Kanban, managing delivery, role delegation, and stretch-goal execution.

Bird Audio Classification (Research Project) | [\[Demo\]](#) | *ML Researcher* Apr 2026 – Present

- **Fine-tuned**, compared, and presented AST and HuBERT models using **PyTorch** to classify 10 bird species.
- Achieved **94/91% accuracy** across large dataset (5,000 samples) and **85/69%** across small dataset (1,500 samples) by analyzing evaluation metrics (macro-F1 scores and confusion matrices).
- **Further optimized** accuracy by ~1–4% via data augmentation, L2 regularization, and learning rate scheduling.
