EDUCATION

University of Georgia, School of Computing — *Major GPA – **3.78**/4.0*
B.S. in Computer Science — *Jun 2023 – Aug 2026*
Relevant Coursework: Data Structures, Algorithms, SWE, Full-Stack Development, OOP, Data Science/ML, Deep Learning, Comp. Networks, Comp. Graphics, Comp. Architecture, Systems Programming

SKILLS

- **Languages:** Java, Python, SQL (PostgreSQL), JavaScript/TypeScript, C/C++, Bash, GDScript.
- **Tools / Frameworks:** Spring Boot, REST, React/Next.js, Node.js, Docker, GitHub Actions (CI/CD), Linux, Agile/Scrum, SDLC, Jira, MongoDB, Redis, Wireshark, RAG, Vercel AI, HuggingFace, NumPy/PyTorch.

RELEVANT EXPERIENCE

Freelance Web Developer ("Holywatr" Band Website) | [Site] — Nov 2025 – Mar 2026
- Built a multi-page brand platform (JS/CSS/HTML) for a band with 720K+ monthly listeners working from client requirement documentation.
- Iterated page content based on client feedback, pitched feature ideas, and standardized project structure.
- Integrated Shopify Storefront **GraphQL** queries and **optimized SEO** (OG tags, sitemap.xml, asset compression).

UGA ACM (Association for Computing Machinery) | [Site] | *Executive Officer, CSIP Chair* — May 2025 – May 2026
- Co-led technical/professional events for a **300+ member org**, collaborating with Google, AWS, and Toyota.
- Led **weekly CSIP workshops** (technical/behavioral), mentoring and iterating content with 20+ students.

UGA DevDogs (Google Developer Group) | [Site] | *Frontend Developer* — Aug 2025 – May 2025
- Implemented UI components in TypeScript, React, and Tailwind CSS for a UGA schedule-builder web app.
- **Collaborated** with the UI/UX team to ensure responsive design and cross-browser compatibility.

PROJECT EXPERIENCE

RAG-AI Portfolio | [Site] | *Full-Stack Dev, UI/UX* — Jun 2025 – Present
- Built a **RAG** pipeline using Gemini embeddings**,** Upstash **Redis** for vector store, and Vercel AI to stream replies.
- **Deployed a Dockerized staging** environment on local Proxmox Ubuntu VM via **CI/CD** pipeline using a self-hosted **GitHub Actions** runner with lint/typechecks and RAG sync gates.
- Managed **AI infra costs** via IP-based rate limiting, query embedding caching, and SHA-256 hashing.
- **Troubleshot** Linux DNS host conflicts by configuring vNICs, Windows NAT routing, and Docker port bindings.

ACM Movies (Cinema E-Booking System) | [Demo] | *Scrum Master, Full-Stack Dev, UI/UX* — Aug 2025 – Feb 2026
- Architected a **Spring Boot** + **PostgreSQL** backend (80+ endpoints, 15 JPA entities), containerized with **Docker**.
- **Reduced** API payloads by **~30–45%** using DTO mapping, pagination, and facade/proxy response patterns.
- Configured JWT claims, Spring Security RBAC, and CORS across API routes, tested via curl + Postman.
- **Led a 5-person Scrum** team in Jira, improving sprint velocity by ~10% through refined user stories, system modeling, and standardized layered architecture.

CourseHub (Awarded "Best Project") | [Demo] | *Team Lead, Full-Stack Dev, UI* — Mar 2025 – May 2025
- Integrated YouTube + Gemini APIs to automate resource curation for UGA students, streamlining study planning.
- Engineered 15+ REST endpoints and 3 **MongoDB** schemas for online resource sharing with **NextAuth** (JWT).
- **Led a 4-person Agile** team via Kanban, managing delivery, role delegation, and stretch-goal execution.

Bird Audio Classification (Research Project) | [Demo] | *ML Researcher* — Apr 2026 – Aug 2026
- **Fine-tuned**, compared, and presented AST and HuBERT models using **PyTorch** to classify 10 bird species.
- Achieved **94/91% accuracy** across large dataset (5,000 samples) and **85/69%** across small dataset (1,500 samples) by analyzing evaluation metrics (macro-F1 scores and confusion matrices).
- **Further optimized** accuracy by **~1-4%** via data augmentation, L2 regularization, and learning rate scheduling.
